# PeerStory: Cisco Secure Firewall

This PeerStory is a collection of quotes from a real user sharing their experience using Cisco Secure Firewall on PeerSpot.

Paul C.
Senior Engineer at
Teracai Corporation

★★★★★

Use Case

Our use cases include inbound access, outbound access, as well as VPN solutions, both site-to-site and for an incoming client. We wanted something that would do all those things at one time, as opposed to having separate boxes.

Valuable Features

The GUI makes configuring it much simpler than the command line.

Results

If we have a power failure at one building, traffic can be routed to our other building. We also have backup data stores. I live in the Northeast, so in the event of ice storms that cause

> **"The technical support is very good. Whenever we call up Cisco, we get a rapid response."**

power outages, it really **enables us to keep functioning as a company rather than going dark** for the amount of time it takes to get the power back.

In terms of resilience, in general, if we have any box failure, being able to fail over to another box or to fail over to another site helps measurably. Cybersecurity resilience is important for all organizations. The number of attacks going on just increases every day.

> **"It's very scalable. You can go to different models of the ASAs and they scale up to as big as you want to go."**
